*****Original verbiage sent by my professional education chair:** Mark House will present The Tampa Heights Project – A 50 acre mixed-use development on the Hillsborough River just north of downtown Tampa which blends a diversity of residential types, professional offices, entertainment, retail shops and restaurants with vibrant public spaces to form a walkable community in the heart of Tampa. His presentation will be followed by David Hunter who will demonstrate Dprofiler. A 3-dimensional conceptual cost estimating tool designed to give you and your clients a quick "go / no-go" decision on a project's feasibility. This will include a demonstration of this software and how it has been utilized for The Tampa Heights Development.
